Dear Dr. Lederberg,

We have been studying in the electron microscope the products of immune K12 ( $Lp^r$ ) after induction. We read with a great deal of interest in your paper (Genetics January 1956) that after transduction of a sensitive you obtained among the  $Gal^+$  a fairly large number of  $Lp^r$  colonies.

We would like very much to include these among our studies and would be very grateful if you could send us the sensitive strain which you used to obtain the data given in your table 8.

Thanking you in advance we remain

Yours truly

*H. Kellenberger*
